

Volume Constraints

=====

Limit the actions or restrict the actions based on channel specific offers to the customers.

Suppose Customer is Qualified

1. Platinum Credit Card
2. Gold Card
3. Premium Credit Card

Offer Name	Propensity / Rank / Priority
Platinum Credit Card	1/ 0.9
Gold Card	2/0.8
Platinum Credit Card	3/0.7

Individually for each action: If we can select, what happened?

=====

As per the Rank or Propensity or Priority, customer receive the only Platinum Credit Card, rest of the offers ingonred.

Result : Platinum Credit Card

As a group for the context (output all actions):

=====

In this case customer received all the offers, even priority or rank is low.

Result : Platinum Credit Card, Gold Credit Card and Premium Credit Card.

Return any action that does not exceed constraint:

=====

Offer Name	Propensity / Rank / Priority
Platinum Credit Card	3/0.2
Gold Card	2/0.8
Platinum Credit Card	3/0.7

In this case Platinum Credit Card is low priority, even though pega it will check the offer and skip, check the next 2-offers.

Result: Gold Card and Platinum Card

Types of Volume Constraints:

=====

Action Level Constraints:

How should multiple actions for a customer be treated?

- ☒ Individually for each action
- ☐ As a group for the context (output all actions)
- ☐ Return any action that does not exceed constraint

Reset constraint counts

- ☒ Individually
- ☐ All at once

Maximum 5 Daily with Action: PlatinumCreditCard (disabled)

Minimum volume

Maximum volume

Reset interval
